

Hi! My name is **Rojita Chwamu Shrestha** .I am from Thimi,Bhaktapur . I am currently studying at BIT 6th sem from Phoenix college of management. I am passionate about technology and enjoy learning new skills that can help me build a successful career in the IT industry.

My primary interest is **Data Science and Data Analytics**.. I have learned Python programming and worked with libraries such as Pandas, NumPy, Matplotlib, Seaborn, and Scikit-learn. I have also studied machine learning algorithms, including Linear Regression, Logistic Regression, Decision Trees, Random Forest, Support Vector Machines (SVM), Naive Bayes, and Principal Component Analysis (PCA). Through these topics, I have gained experience in data preprocessing, visualization, model building, and evaluation.

I enjoy working on practical projects because they help me understand concepts better. One of my completed projects is a **Music Genre Classification** system using machine learning, and I am also interested in developing AI-powered applications such as chatbots using Streamlit and modern AI models. Along with data science, I have basic knowledge of HTML, CSS, SQL, Git, GitHub, Photoshop, and Figma.

I believe in continuous learning and improving my skills every day. My goal is to secure an internship and build a successful career as a Data Analyst or Data Scientist. In the future, I also hope to contribute to the technology sector by solving real-world problems with data-driven solutions.

Outside academics, I enjoy exploring new technologies, designing creative graphics, watching movies and listening to music, and traveling. I consider myself a curious, hardworking, and determined learner who enjoys understanding concepts deeply through practice and real-world applications. My ambition is to keep growing professionally and become a skilled IT professional who can make a positive impact in the field of technology.
