

About Myself

Hi, my name is Ronit Bhattarai. I am from Jhapa, in eastern Nepal, and I am currently 18 years old.

I spent my entire childhood in my hometown, where I completed my primary education at Bibhuti Vidya Mandir, Jhapa. About four years ago, I moved to Kathmandu to pursue my higher education. I graduated from Uniglobe College, Kamaladi, and I am currently pursuing a Bachelor of Information Technology (Honours) [BIT (Hons)] at Phoenix College of Management, Maitidevi.

I am a student with a wide range of hobbies and interests. I enjoy playing sports, reading books and comics, and watching movies in my free time. I am also passionate about computers, especially in the fields of Data Science and Artificial Intelligence. My interest in these fields grew from the excitement I experienced while solving problems, analyzing different situations, and working on mathematical concepts. I have always been curious about how AI works and how I can train my own AI models to perform tasks according to my requirements.

I have a strong foundation in Python and its libraries. I have also worked with several Python frameworks, including Scikit-learn, TensorFlow, and Streamlit. Using these technologies, I have developed several projects, such as a temperature change analysis system, a disaster warning system, and a financial fraud detection system. One of my projects was recently showcased at the Tech Expo held at Phoenix College.

At present, I am focused on my studies and am not involved in any full-time, part-time, or internship positions. However, in the near future, I hope to gain practical experience and expand my knowledge by working on real-world projects and opportunities in the fields of Data Science and Artificial Intelligence.

As for a personal secret, I do not have any major secrets, but I do have a unique learning technique. Whenever I study something new, I visualize the concepts by creating my own stories and imagining different characters. This method makes learning more engaging, enjoyable, and much easier for me to understand and remember.
