

My name is Salina Shrestha, and I am a Bachelor of Information Technology (BIT) student from Nepal. I am passionate about technology and continuously strive to expand my knowledge and skills in the field of computer science. Throughout my academic journey, I have developed a strong interest in programming, data science, machine learning, and artificial intelligence. I enjoy solving real-world problems using technology and believe that continuous learning is the key to personal and professional growth.

During my studies, I have worked on several academic and personal projects that have helped me strengthen both my technical and analytical abilities. One of my major projects was a Loan Approval Prediction System using Machine Learning, where I applied data preprocessing techniques, trained machine learning models, and built a user-friendly interface using Streamlit. This project gave me practical experience in Python, Scikit-learn, Pandas, NumPy, and MySQL while teaching me the importance of data analysis and model evaluation.

In addition to my academic projects, I successfully completed a four-week Data Science internship at CodSoft. This internship provided me with valuable hands-on experience in applying machine learning concepts, working with real datasets, and improving my problem-solving skills. It also strengthened my confidence in working independently and meeting project deadlines.

I enjoy learning new technologies beyond the classroom. Recently, I have been exploring Generative AI, Large Language Models (LLMs), prompt engineering, Retrieval-Augmented Generation (RAG), vector databases, and AI agent frameworks. I believe these technologies will shape the future of software development, and I am excited to continue learning and building projects in this field.

Apart from technical skills, I value qualities such as discipline, perseverance, teamwork, and adaptability. I enjoy taking on new challenges because they help me improve both personally and professionally. Whenever I encounter difficulties, I see them as opportunities to learn rather than obstacles.

My career goal is to become a skilled Data Scientist and AI Engineer. I hope to contribute to innovative projects that create meaningful solutions for real-world problems. In the future, I also aspire to pursue higher education abroad to deepen my expertise in artificial intelligence and data science while gaining international exposure.

Overall, I consider myself a curious, hardworking, and goal-oriented individual who is always eager to learn. I believe that with dedication, continuous practice, and a positive mindset, I can achieve my goals and make a meaningful contribution to the technology industry.
